Evercomm Unveils New Features for Financed Emission Management at CTBC's Net-Zero Sustainability Forum

Jerry Shaw, Executive Vice President, CTBC Bank presenting the full suite of end-to-end decarbonisation tools at the CTBC Bank's annual Net-Zero Sustainability Key Action Forum

Taipei, Taiwan, Wednesday, 11 September 2024 - Evercomm was proud to participate in [CTBC Bank](#)'s annual Net-Zero Sustainability Key Action Forum, where over 3,000 attendees gathered to champion a sustainable future. This flagship event brought together Taiwan's leading sustainability practitioners, including CHIMEI Corporation, China Steel Corporation, and ASE Holdings, all of whom took centre stage to share their best practices and commitment to a low-carbon future.

At this year's forum, Evercomm, in collaboration with [Industrial Technology Research Institute \(ITRI\)](#) and CTBC Bank, pre-launched an enhanced suite of end-to-end decarbonisation tools. A key highlight of this launch was the introduction of new features

specifically designed for managing financed emission portfolios, empowering financial institutions like CTBC Bank to more effectively support and manage emissions reduction efforts across their lending portfolios.

Evercomm's software tools enable financial institutions to play a pivotal role in guiding their clients towards a low-carbon future. By providing features that accurately measure, track, and simulate carbon footprint reduction activities and their environmental and financial impacts, financial institutions can now offer targeted support, helping businesses implement tangible decarbonisation strategies. These features are crucial not only for meeting immediate sustainability goals but also for ensuring that lending portfolios align progressively with net-zero targets, paving the way for a sustainable financial ecosystem.

"Financial institutions have a pivotal role in driving sustainability across industries," said Eliot Huang, Evercomm's Business Development Manager (Taiwan). "Our new financed emission portfolio management feature empowers financial institutions to become champions of decarbonisation, aligning their investments with long-term climate goals and accelerating global progress towards net-zero."

As corporate sustainability and decarbonisation demands grow, Evercomm remains committed to providing businesses and financial institutions with world-class solutions to meet their carbon reduction and sustainability objectives. This collaboration with CTBC Bank and ITRI represents a significant step forward in supporting Taiwan's decarbonisation agenda, ensuring that industries and financial institutions have the tools to thrive in an era of sustainable growth.

It was an honour to participate in this flagship event, contributing to Taiwan's green finance and industrial transformation. Together with CTBC Bank and ITRI, Evercomm is dedicated to helping businesses, financial institutions and cities embrace a new era of sustainable growth while ensuring emissions reduction activities are effectively managed, and net-zero ambitions are realised.
